

Corner Booth Guidelines

Corner Booths With Full Side Walls

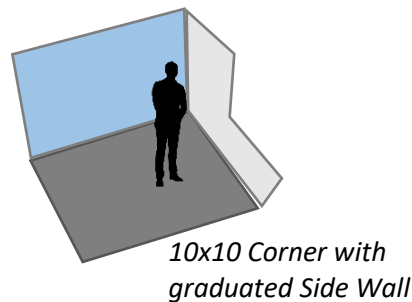

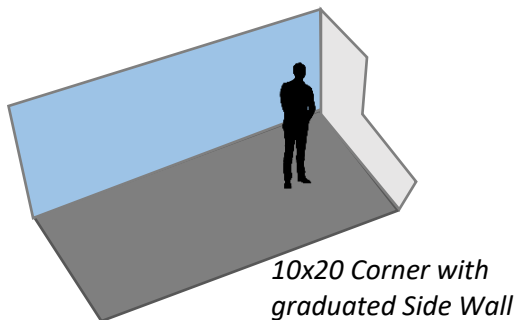

Many of the corner booths have been pre-approved by show management to have full side walls, this means you don't have to have a graduated side wall, it can be **8ft'** high for the full **10ft'** length of the side wall.

Those exhibitors with a full side wall must ensure that the exterior of the side wall facing your neighboring exhibitor is plainly finished and may not contain booth identification, logos or advertisements.

Corner Booths With Graduated Side Walls

Those exhibitors with a graduated side wall must ensure that the exterior of the side wall facing your neighboring exhibitor is plainly finished and may not contain booth identification, logos or advertisements.

Corner Booths With No Side Walls

Side walls are not mandatory, if you do not require side walls please ensure that you let your sales rep know this so they can ensure the exhibitor next to you is aware that you will not be coming in with side walls.
